

VoCoVo Wireless Handset

The **VoCoVo wireless handset** integrates with the VoCoVo range of products and brings a new flexibility to receiving messages and colleague communication.

With VoCoVo handsets, colleagues can communicate instantly via handsets or headsets.

Like the VoCoVo headset, the handset relays messages generated at checkouts, and callpoints or from external sources.

Audio callbacks are a button press away. The VoCoVo Handset displays, in priority order, the most recent calls active on the system, and is as useful for monitoring the status of your workplace as it is a communication tool.

In broadcast mode, the handset can be placed on a desk or worn hands free to monitor VoCoVo conference activity, with freedom at any time to press the Push to Talk button and join a conference.

VoCoVo handsets have full telephone capability and can be integrated seamlessly into an existing telephone system, or used as an extension on telephony enabled VoCoVo systems.

VoCoVo handsets can also receive real-time message alerts generated by the VoCoVo system. For example, "Freezer 6-temperature warning!" and "Delivery-ETA 7.30am".
