

SAFETY FIRST. FRONTLINE READY.

SEE EVERYTHING. RESPOND FASTER.

Public-facing frontline workers are among the most vulnerable, dealing with everyday risks of verbal or physical abuse. Protecting staff health, safety and welfare is the legal duty of every organisation and is fundamental for operational efficiency. Being able to see everything your people do before, during and after an incident allows you to monitor situations in real-time and respond faster when things get out of control. Within the Motorola Solutions business technology ecosystem, body-worn cameras address this need perfectly.

CAPTURE. PROCESS. SHARE.

Body-worn cameras deliver valuable insights from the wearer's perspective, capturing video in the moment so you can send immediate help if a frontline worker becomes vulnerable.

The footage captured provides a secure and reliable record of events that can help secure prosecutions and counter complaints or false accusations. Even just wearing a body-worn camera often helps de-escalate a heated situation by informing potential offenders that their actions are being captured on video while making workers more accountable and inclined to act in a professional manner at all times.

WHY INVEST? FOUR REASONS

Whether your frontline staff work in retail, hospitality, healthcare, parking enforcement, prisons or deliveries, investing in body-worn cameras safeguards them and your organisation. Here's four core benefits that will help you see the whole picture for optimum safety and efficiency:

PROTECTS WORKERS

Wearing a camera is a proven deterrent to abuse. Should a situation escalate, recording the encounter provides an unquestionable source of evidence.

PROMOTES ACCOUNTABILITY

Generates a tamper proof audit trail including time and location data that ensures wearers are totally accountable for their actions.

COMPLEMENTS CCTV

Integrates seamlessly with existing fixed CCTV infrastructure, improving visibility by providing a first-person, on-the-ground perspective.

PRESERVES SECURITY

Video recordings are fully encrypted and cannot be accessed, viewed or deleted by a wearer without authorisation.

PUT SAFETY FIRST WITH MOTOROLA SOLUTIONS

Designed to meet all the latest quality and video management software standards, the Motorola Solutions portfolio of body-worn cameras equips workers with a full security solution that keeps them safe on the job. Devices are easy to wear, simple to use and enable effortless recording and streaming of high quality HD video with data encrypted on the device to ensure footage remains secure at all times. You can integrate them with any ONVIF-compliant Video Management System (VMS) to ensure full compatibility with your existing CCTV setup.

One of the main benefits of Motorola Solutions body-worn cameras is versatility. Ideal for all kinds of commercial applications, they work equally effectively for one person or thousands and are ready to scale with your business needs and growth. If you have a large workforce, RFID technology allows fast and efficient allocation of cameras to individuals via a simple swipe of an RFID tag or ID card. Recordings are logged to that individual in the event of an encounter.

There are three models in the Motorola Solutions range. Choose the features you need to meet your own personal safety challenges.

VT50

Compact, discreet and intuitive, the VT50 is easy to wear and use, making it ideal for everyday use in environments such as hotels, hospitals, airlines and retail stores.

It captures 720p High Definition video and high-quality audio, which can be streamed over Wi-Fi® or uploaded via micro USB or its docking station. The VT50 is able to simultaneously live-stream and record HD video for up to 1 hour on a single charge. Look for the VT50 XLR with an external battery pack if you need more recording time and storage capacity.

VT100

Designed for customer-facing staff with customisable name tag, the lightweight VT100 is ideal for uniformed workers such as shop assistants, traffic wardens and car park attendants.

As well as integrating seamlessly with existing fixed CCTV systems, this camera also features remote alarm activation with push-to-stream alerting delivering an audible alarm and live video feed to the control room when the wearer presses the record button. This improves visibility and situational awareness, making the VT100 the camera of choice for connected workers.

VB400

Ruggedly built with IP67 protection against dust and water and up to 12 hours of battery life, the VB400 is ideal for staff working long shifts such as security guards, prison officers and delivery drivers.

This is a state of the art camera delivering evidence-grade 1080p or 720p High Definition video and high-quality audio, industry-leading low light performance and pre / post-record for fully capturing unexpected interactions. Multiple connectivity including Bluetooth sensors, Wi-Fi, live streaming and peer-assisted recording enables the VB400 to effortlessly capture the big picture and respond quickly in the moments that matter.

VIDEOMANAGER

Advanced media, device and user management software that enhances the capabilities of the Motorola Solutions range of body-worn cameras. VideoManager is easy to use and highly configurable, allowing you to produce a large variety of reports and create incidents, as well as edit, redact or retain original footage when generating an audit trail.
