

Axon Assistant

AI-Powered Voice Assistant for the Frontlines

Putting the power of AI right on officer's vests.

Officers often face language barriers, fragmented information access, and the need to make fast, accurate decisions in the field, all while staying alert and hands-free. When every second counts, waiting for additional resources or taking focus away to look at other devices can compromise safety and efficiency.

Axon Assistant puts a powerful AI voice assistant right on officers' vests via the Axon Body 4. With simple push-to-talk activation, officers can receive real-time translations, field-specific answers, and agency-approved data — all without taking their eyes off the scene.

Capabilities

Real-Time Translation

Facilitate mutual understanding when a human interpreter is not immediately available with audio translations of speech across 50+ languages through the camera, delivered in seconds.

Agency Info

Gain real-time answers pulled from data, like license plates and policy information, from approved agency systems.

General Info

Get on-the-spot answers to field-relevant queries, from drug street names to math calculations.

Benefits

Faster, Safer Communication

Quickly bridge language gaps and respond to community members without delay, when other resources are not immediately available.

Leverage Existing Technology

Used through officers' existing Axon Body 4 device, Axon Assistant reduces the need to handle other devices or apps.

Trust Through Understanding

Translate in the moment, respond with clarity, and build stronger community relationships during everyday interactions.

Enhanced Situational Awareness

Audio-based translations and answers reduce visual distractions and allow officers to focus.
